

iMIS Add-On Solution - Single Sign on

The Single Sign-On (SSO) Provider product was created to allow a user to pass through multiple password-protected websites using one login protocol (usually an email address and designated password). The SSO Provider product allows your organization to seamlessly connect a variety of web properties so that your users do not face the inconvenience of having to remember multiple logins for various sites and your organization avoids the cost of supporting users who commonly forget and cannot retrieve their login information for more than one site. Once the SSO Provider product is in place, your users will be able to log into your primary (www) website, your members only transactional website (e.g., iMIS public views or e-Series), as well as many other password-protected websites such as job banks, advocacy sites, and magazine/journal publication sites that your organization offers to its members.

Number of Users	Price
1-3 Full/Concurrent	\$1,495
4-10 Full Concurrent	\$2,995
11-25 Full Concurrent	\$3,995
26+ Full Concurrent	\$5,995

20% Annual S/U Fee

5% Discount for NiUG members
